

LASH LIFT & TINT

PRE & POST CARE

PRE-TREATMENT CARE

- You may not be treated if you:
 - arrive to your appointment with a sunburn/rash/inflamed skin/cuts/scratches
 - are currently undergoing cancer treatment (chemotherapy/radiation)
 - have active eczema, psoriasis, or dermatitis in the area
 - have an allergy to any ingredients used (if this is a concern, review ingredient lists with your technician prior to scheduling treatment)
 - are pregnant or breastfeeding
-

THE DAY OF

- Arrive to your appointment with the treatment area free of make up (including mascara, eyeliner and eye shadow). A normal morning skincare routine is fine. If you arrive with makeup on, this will increase the risk of sensitivity as the eyes have to be rubbed in order to remove makeup. Residual makeup will inhibit the products from working to their best potential, altering your results for the longest lasting lift and tint.
 - Remove contact lenses prior to appointment
-

POST-TREATMENT CARE

This aftercare advice is given to ensure the client fully understands what should and should not be done 24-28 hours post treatment for longevity of the lash bomb treatment results

- Do not apply make-up or receive any other eye treatments for 48 hours after your treatment.
 - Avoid rubbing the eyes
 - Avoid putting contact lenses back in for 24-48 hours
 - Avoid swimming/sauna for 24-48 hours
 - Keep lashes dry for 24-48 hours (including showers)
 - Use a lash conditioner daily *for best results*
 - Comb the lashes upwards using a mascara wand, **do not** comb from the top downwards
 - Sleep on your back for up to 2 days after treatment to prevent the lash shape from being altered by the pillow
 - Sleeping in any position other than on your back highly increases the likelihood of lash shape being altered. We do not retreat slept on lashes.
 - If any stinging or swelling occurs, keep applying a cold dampened cotton pad, cold compress or cooling spray to soothe to eyelid only, if it persists please let us know and take photos if relevant
-

NEXT TREATMENT

- Schedule treatments 6-8 weeks apart. NO sooner as this can damage your lashes from over processing.
- If you experience any side effects to this treatment that you are unsure of, or that have not been explained to you, contact Odette's Clinic immediately with pictures (if applicable)
